Rescuing potato from buckwheat volunteers

Listen to the latest podcast episode

January 29, 2026

Rescuing Potato from Buckwheat Volunteers with Dr. Andrew McKenzie-Gopsill | Field, Lab, Earth #138

Buckwheat can be a powerful driver of ecosystem services in potato rotations grown in Canada, but with its long-lived seeds and ability to make a whole lot of them in a short time, it can also pose a serious volunteer problem. In this episode of the *Field, Lab, Earth*

podcast, Dr. Andrew McKenzie-Gopsill discusses how creating a framework to reduce volunteers can help keep this helpful plant from turning into a fearsome weed.
